Kettle  
Angle-poise lamp  
Hairdryer  
Solar garden light  
Bicycle  
Bicycle pump  
Computer mouse  
Folding seat  
Soldering iron  
Hand drill  
Crash helmet

This list of appropriate products that could be used for product investigation in RMT was collated from suggestions by teachers during Inset events.

Most of these products would be appropriate for use in the Graphic Products course too.

When selecting products, some will have used more materials and processes in their manufacture than others, so it is acceptable to focus on a minimum of two materials and two processes, rather than investigation all of these in a complex product
